Summary of tech specification of milk Homogenizer:

- Alloy Cast Iron Crankcase for proper surface hardness, strength, grain structure and graphitization to dampen and absorb noise and vibration.
- Plasma Nitride Crank shaft for highest possible surface hardness with tough core.
- Monoblock forged 316L Liquid block design is adopted for easy maintenance & operation.
- Full Stellite Suction and Discharge valves and valve seat ensure constant throughput over operational life of the equipment.
- Homogenizing valves are made of Tungsten carbide material to sustain high abrasion and cavitations.
- Hydro pneumatic homogenization system: very handy and easy Hydro-Pneumatic operation. Pressure is required to be set once during commissioning by turning on the pressure-adjusting knob from operator's panel. Pressure setting is locked after it is set at the desired value. The operator has to just put on 1st. & 2nd. stage switches for regular operation that actuates the pneumatic cylinder, and homogenizing pressure will automatically develop to the present value.
- Forced lubrication system with oil pressure switch ensures proper lubrication at exact location.
- External oil cooling system provided to avoid any possible contamination and emulsification of oil by water in the crank case.
- Electronic water flow sensor is provided to assure proper flow of cooling water and ensures air supply.
- Starter panel shall be provided near the machine along with all the electrical switchgears and relays. The power and Earthing connections to the main panel are to be made by the supplier. Inter-connecting power & control cables are to be carried out by the supplier. The panel shall have hour meter to record total running hours. It shall have digital ammeter on the front panel.
- Heavy duty structural & sturdy feet to minimize vibration of machine.
- Blower is to be provided to remove hot air inside the cabinet.

Instruments: The following controls, indication and instruments shall be provided on the machine:

- Indication of homogenization pressure with sanitary design diaphragm type pressure gauge of 4 inch dial.
- Sanitary diaphragm type pressure gauge on the product inlet with electrical disconnection for low pressure.
- Indication of air pressure for hydro-pneumatic system for 1st. & 2nd. stage homogenization with pressure gauge.
- Electronic solid stage pressure switch for lubrication oil pressure.
- Lubrication oil pressure gauge.

Operator panel and Instruments: The operator panel is to be provided on front side of the Homogenizer at eye level. The following controls, indication and instruments shall be provided on the machine:

- Indication lamp for product pressure failure.
- Indication lamp for water/air failure.
- Indication lamp for lubricating oil pressure failure.
- Indication lamp for electrical tripping and faults.
- Start, Stop & Reset push buttons with indicating lamp.
- Emergency Stop push button.
- 1st. & 2nd. stage homogenization switches with indicating lamp.
- 1st. & 2nd. stage homogenization pressure regulating knob.

DETAILED SPECIFICATIONS:

Liquid Block: Liquid block is formed from a heat treated single AISI 316L forged block that is checked with ultra sound. This mono-block unit houses suction & discharge valves, pistons, and gaskets in a convenient easy to maintain design layout.

Interchangeable suction & discharge non-return valves are made from full Stellite material having good wear resistance properties for long trouble free operation. Full Stellite lapped valves hold the product efficiently without any leakage thus yielding full designed capacity constantly that does not drop with machine running life.

Pumping pistons in stainless steel AISI 316L are hard chrome coated for long piston & piston gasket life.

Power Block: Power Block is manufactured from alloy cast iron that houses Crankshaft, Connecting rods and Crossheads. The Crankshaft is made from alloy steel that undergoes multi-stage heat treatment and stress relieving. The crankshaft is plasma treated to obtain highest possible surface hardness for a crankshaft that generally finds application in marine & small aircraft engines. Heavy design Connecting rods are used with big-end journal bearing and small-

end bushes. The Crosshead shaft is hard chrome plated and ground for better surface finish, longer seal & wiper life.

Homogenization Block: Homogenization blocks are made from forged AISI 316L steel. Homogenization is carried out in two stages. Homogenization pressure is set with turn of a knob from operator panel with the help of hydro-pneumatic pressure booster system.

Homogenizing Head: Homogenizing valve, valve seat and impact rings are made from Tungsten carbide material. Impact ring is of reversible design.

Lubrication system: Forced lubrication system is provided for connecting rod big end journal bearings. The system delivered filtered lubricating oil with pressure at exact locations. This dampens the cyclic force on crank shaft, eliminates vibrations and ensures long trouble and maintenance free life of critical components.

Lubrication pressure is monitored and the machine is stopped with an indication if oil pressure falls below preset value with oil pressure safety switch.

A remote oil level indicator is provided on the front cover for easy visibility.

Lubricating oil is extremely cooled outside the crank case to avoid contamination and emulsification of oil with any possible water leakage that can lead to a major failure. A plate heat exchanger is used for oil cooling where oil pressure is set at a higher value than that of water pressure to avoid any possible contamination. Oil is filtered just before the point of use.

Pulsation Dampeners: SS pulsation dampeners shall be provided on the inlet and outlet of the machine to smoothen the pulsating effect of the homogenization pumps.

Inlet and Outlet Connections: Standard SMS unions shall be provided at the inlet/outlet connections. Inlet and outlet are on the front left side of the machine.

Main Motor : Three phase four pole squirrel cage induction motor in TEFC enclosure. IP 55 Protection, Class "F" insulation of ABB make shall be provided.

Operator Panel: An operator panel is mounted on the machine for operation for operation of the machine. The panel has Start, Stop buttons, push buttons for both 1st and 2nd stage pressure On/Off with homogenization pressure control knobs. Any tripping of machine because of electrical, water/air, oil or product failure is indicated by lamps.

Drive System: Imported unicast gear box is used along with a single long life Multi-Pull Poly-V belt for flap free zero slippage silent and efficient power transmission.

Structural: Machine is supported on heavy design structure.. The machine is covered with AISI 304 covers with the original hairline mill finish. Heavy duty stainless steel articulated feet with anti-vibration pad are used for leveling and vibration dampening. A study centrifugal silent blower is used to remove hot air inside the cabinet. The machine has small foot print and operator panel is located at a convenient level.

Electrical Panel: Powder coated duly wired electrical panel having starters, controls and incoming switch is supplied with the machine. The panel is to be installed near the near the Homogenizer and interconnecting wiring are to be carried out. Three phase power supply 415 V (+/- 10%) 50 Hz (+/- 5%) with Earthing is to be provided to the panel.

Tools & Spares: 1 set of special tools and spares for commissioning are to be provided with the machine.

Machine Manual: 2 numbers of operation and maintenance manual is to be provided at the time of machine supply.

Efficiency Test:

- i) Bidder has to give homogenizations efficiency guarantees more than 90% or creaming index less than 10.
- ii) Sample shall be drawn at outlet of the Homogenizer.
- iii) Homogenizer efficiency shall be established by standard Feral Index or by NDDB creaming index method.
- iv) Test shall be conducted of the homogenizer.

All necessary SS pipelines/valves/Bends/Unions etc. for connecting with the existing dairy equipment (Pasteurizer, Separator etc.) for commissioning & trial run shall be under the purview of the bidder scope (i.e. to be supplied and fitted by the bidder).
